RIPPE GELBVIEH

21st Annual Bull Sale

104 Balancer® & Gelbvieh Bulls,
70 Registered & Commercial Open Heifers
12 Fall Bred Heifers

SATURDAY, MARCH 14 • 1:00 P.M.

Complimentary Lunch • 12:00

SALE LOCATION: Belleville 81 Livestock – Belleville, KS

Greetings Cattlemen:

Rippe Gelbvieh has continued to assemble a cow herd that is balanced in ALL traits that are economically important to our customers—commercial cattlemen. At Rippe Gelbvieh, we would like to have the opportunity to put our genetics and crossbreeding program to work on your operation. We have a complete lineup of Balancer® and purebred bulls that have enough genetic variation to compliment your cow herd and allow you to take full advantage of the “free lunch” that heterosis and hybrid vigor offer.

I feel we are doing more from a genetic selection and testing standpoint than the majority of seedstock operations. I believe we are separating ourselves from other seedstock operations in two main areas. The first is carcass data. Most operations ultrasound scan or DNA their bulls, but how many scan their bulls, scan their heifers, and receive individual carcass data on all of their steers? In addition, we try and receive data from a few of our customers' cattle each year to measure our success from a carcass standpoint. We feed cattle throughout the year. A lot of people just talk about it. The second area is measuring cow size and efficiency. Each cow is weighed every fall when we pregnancy check. Later, this is compared to the weaning weight of her calf to calculate percent body weight weaned of each cow. We also track the essentials in a cow like structure and udder scores. This year we included all of this data in the catalog. It is our hope that you find the more information we track valuable. It is important for us at Rippe Gelbvieh to track our cow herd and our bulls so that we can make genetic progress.

Be sure to check our website, www.rippegelbvieh.com, as the sale draws near. We will be posting additional information including the supplement sheet and videos of the bulls. We encourage each of you to visit us prior to the sale. These visits allow us a lot more time to understand your program's needs and wants so we can better assist you in selecting your new herdsire.

As always, we look forward to visiting with past customers and making new ones. Allow our program to help maximize the profitability of your cow herd.

General Information – Terms & Conditions

Sale Location:

Belleville 81 Livestock, 1160 Old US Highway 81,
Belleville, KS 66935. Located ½ mile south of the Hwy 81
and 36 intersections.

Auctioneer:

Kyle Elwood, Salina, KS 785-493-2901

Ringmen:

Andee Marston, Kansas Stockman 785-250-4449
Troy Applehans, CBD Oils 303-886-0775
Lance MacLennan, Bird Dog Training 303-895-9335

Supplement Sheet:

The supplement sheet will be available on sale day and
on our website about 3 days prior to the bull sale. Any
information on the supplement sheet or announced on sale
day will take precedence over the catalog.

Health:

All bulls will be ready for interstate shipment. They will be
BVD tested and had their Lepto shot. In addition, they will
have passed a breeding soundness exam along with being
poured with an Ivermectin type of product before delivery.

Catalog designed by:

Gelbvieh Media Productions

Terms and Conditions:

Cash on sale day. All cattle will sell under the recommended
terms of the AGA. If you would like to be offered credit,
please call Duane prior to sale day.

Volume Discount:

If you purchase five or more bulls in one year, you will
receive 5% off the price of each bull.

Delivery & Trucking:

Free delivery within 250 miles. For all bulls further than 250
miles, we will make every effort to accommodate the buyer.
Any bull taken sale day, we will deduct \$100 from the bill.
The delivery information for the heifers is located below the
commercial heifers section in this catalog.

Transfers:

Registration papers will be transferred upon request. Any
Registration paper wanted on heifers is for \$100/hd.

Liability:

Neither the sale host, sale facility, sale management, nor
the auctioneer assumes any liability for any accidents that
may occur.

Rippe Gelbvieh Bull Guarantee:

- Our #1 goal is customer satisfaction.
- Rippe Gelbvieh takes 100% responsibility on every bull purchased from our sale until the bull is delivered to your ranch. If there is any problem with the bull upon delivery or at our place we will cover the cost completely and make sure you are satisfied.
- If you experience a problem with disposition or structural soundness soon after you receive your purchase, Rippe Gelbvieh will replace the bull with similar quality, take the bull back and offer credit on next year's sale.
- If you experience abnormal calving difficulty where the herdsire is at fault we demand that the bull be sold for slaughter and a full refund applied to a replacement bull of the buyer's choice.

First Season Death and Injury Warranty:

Rippe Gelbvieh has offered to share this cost with their customers. There was a lot of confusion over our old warranty. Our new program will allow us to keep our customers satisfied and allow both parties to be satisfied with everyone sharing in the cost.

Coverage/Limitations:

The coverage of this warranty is for the first breeding season or for the first 90 days after the bull is turned out, unless other arrangements are made. This warranty is good for death and all loss-of-use injuries. The warranty is void if this is caused by negligence or mistreatment of the bull. Replacement value will be the actual purchase cost of the Rippe Gelbvieh bulls covered minus any salvage value or other compensation received by the customer.

Claims:

All claims must be reported to Rippe Gelbvieh within 24 hours of discovery and must be examined by a licensed veterinarian.

Injured:

If the injury is not permanent and can be returned to service, Rippe Gelbvieh will work with you to supply a replacement bull to use, at no cost, until the original bull can be returned to service. If the injury is permanent, Rippe Gelbvieh will supply a bull to finish out the season. At the end of the breeding season the customer can choose to keep the replacement bull as fulfillment of this warranty or return him to Rippe Gelbvieh and receive credit on next year's sale. The credit will equal the purchase price of the bull minus any salvage value from the original bull.

Death:

When a Rippe Gelbvieh bull dies between the dates outlined above Rippe Gelbvieh will supply another bull to finish out the breeding season. At the end of the breeding season, the customer can either keep the replacement bull as fulfillment of this warranty or receive credit on next year's sale. The credit will equal the purchase price of the bull minus any compensation received by an insurance company.

Cost:

Cost for the death and injury warranty will be 5% of purchase price, due at time of purchase. We feel that this is a reasonable cost where we can all share in the cost of a loss in a bull during the first breeding season. If a customer chooses not to cover their animal against death or injury, they assume all risk associated with the bull once it leaves our place.

EPDs
 Expected progeny differences. Winter 2020 evaluation provided by the AGA

Homozygous:

If an animal is homozygous for polled or black, you will not have a horned or red calf born out of this sire. If an animal is heterozygous, it carries one allele for either horned/polled or red/black.

Heifer Bulls

This year we again decided to denote heifer bulls with the graphic , to aid in your bull selection. If you see a bull with an Rippe Gelbvieh believes it is a heifer bull.

Udder:

The first number is suspension and second references teat size. 9 is ideal. It represents very small teat size and very tight udder suspension. 1 represents very large, ballooned shape teat and a very pendulous suspension.

Doc = Docility:

1 - The bull is content standing alone. 2- The bull is nervous when standing in a pen alone. 3 - The bull is looking for a hole in the fence when alone. 4 - The bull is looking to chase you out of the pen.

American Gelbvieh Association Expected Progeny Differences (EPDs)

Below is an exhaustive list of the expected progeny differences (EPDs) and index values provided by the AGA along with a definition of each trait that is measured. Since AGA's release of BOLT-powered EPDs on August 6, 2018, the majority of EPDs are BOLT EPDs, which means that Gelbvieh and Balancer® animals BOLT EPDs can be directly compared with other animals in the registries of other partner breed associations within the International Genetic Solutions (IGS) group. Gelbvieh and Balancer EPDs that are excluded from BOLT include: heifer pregnancy, 30-month pregnancy, and dry matter intake. The \$Cow, efficiency profit index, and FPI™ indices are unique to the AGA and are not comparable across breeds.

Maternal Traits

Calving ease direct (CED): Percent of unassisted births of a bull's calves when he is used on heifers. A higher number is favorable, meaning better calving ease. This EPD can be vital to a rancher looking to decrease the amount of calves pulled in his herd.

Milk (MILK): The genetic ability of a sire's daughters to produce milk expressed in pounds of weaning weight.

Calving ease maternal (CEM): Represented as percent of unassisted births in a sire's first-calving daughters. A higher number represents more favorable calving ease. This EPD is important to a rancher's bottom line because it predicts which animals produce daughters with a genetic pre-disposition to calve unassisted as heifers.

Heifer pregnancy (HP): Predicts the probability that a bull's daughters will become pregnant as firstcalf heifers in a regular breeding season, expressed as a percent. A higher value of this EPD is favorable, meaning that a higher percentage of a sire's daughters get pregnant as first calf heifers compared to other sires in his contemporary group.

30-month pregnancy (Pg30): Predicts the probability that a bull's daughters will become pregnant and calve at three years of age, given that they calved as first-calf heifers. This EPD is expressed as a percent, again, with a higher number being more favorable meaning a higher percentage of a sire's daughters will calve at three years of age, given they calved as firstcalf heifers.

Stayability (ST): Predicts the genetic difference, in terms of percent probability, that a bull's daughters will stay productive within a herd to at least six years of age. The stayability EPD is one of the best measures currently available to compare a bull's ability to produce females with reproductive longevity.

Growth Traits

Birth weight (BW): Predicts the difference, in pounds, for birth weight of the calf.

Weaning weight (WW): Predicts the difference, in pounds, for weaning weight (adjusted to age of dam and a standard 205 days of age). This is an indicator of growth from birth to weaning.

Yearling weight (YW): Predicts the expected difference, in pounds, for yearling weight (adjusted to a standard 365 days of age). This is an indicator of growth from birth to yearling.

Carcass traits

Yield grade (YG): Differences in yield grade score, which is a predictor of percent retail product. Smaller values suggest that progeny will have a better lean to fat ratio.

Carcass weight (CW): Differences in pounds of hot carcass weight, adjusted to an industry standard age endpoint.

Ribeye area (REA): Differences in ribeye area in inches between the 12th and 13th rib. Greater ribeye areas are preferable.

Marbling (MB): Predicts the differences in the degree of marbling within the ribeye as expressed in marbling score units. Greater marbling numbers are preferable and are an indicator of higher carcass quality grades.

Fat (FT): Differences for fat thickness, in inches, for a carcass over the 12th rib, smaller numbers of fat thickness are preferable as excess fat can be detrimental to yield grade.

Efficiency Traits

Dry matter intake (DMI): Represents the average daily dry matter intake per day consumed in pounds. A negative, or lesser value, is more favorable. For example, Bull A has a DMI EPD of .15 and Bull B has a DMI EPD of -.20, so the progeny of Bull B consume, on average, .35 pound less dry matter per day than progeny from Bull A.

Indexes

Total maternal (TM): An index that combines growth and milk information as a prediction of the weaning weight performance of calves from a sire's daughters. As an index, this value is not reported with an accompanying accuracy. A greater TM value means a mother returns comparatively higher weaning weights on her calves. $TM\ Index = MK\ EPD + \frac{1}{2}\ WW\ EPD$.

\$Cow: Represents the genetic value in dollars of profit of an animal when retained as a replacement female relative to other animals in the herd. A higher number represents more profitable genetics for maternal productivity. \$Cow will serve producers in selecting bulls that will sire daughters with stayability and reproductive efficiency as well as other traits that lead to profitability in a production system, such as milk, calving ease, moderate mature weight and the ability of calves to gain. A female's genetics also influence the performance of her calves in the feedlot and at slaughter, so traits such as feed efficiency and carcass value are also included in \$Cow.

Efficiency profit index (EPI): An economic selection index developed to aid producers in selecting for more feed efficient cattle that still have acceptable amounts of gain. The EPI provides slight negative pressure on intake, while keeping gain at a constant value. By selecting on this index, producers will be able to find those animals that gain the same amount as their contemporaries while eating less.

FPI™: An economic selection index, which stands for feeder profit index, is designed to aid producers in selecting sires whose progeny will perform in the feedlot and are sold on a grade and yield standpoint. Well ranking sires for FPI have higher marbling and carcass weight than their contemporaries. As a terminal index, little emphasis is put on maternal traits such as stayability and calving ease.

Milk EPD

There is a moderate negative genetic correlation between direct and maternal weaning weight in the current growth model, this means animals who have positive weaning weights can see negative movement in Milk. Please note that there has always been a negative correlation however, with genomics, new markers and the marker effects this is now exaggerated. Another thing to note here is that the base animals for the IGS are Red Angus, Simmental, and Angus. This means that breeds outside of that base see some more drastic shifts when changes are made like the move to BOLT.

The good news is the science team at IGS realizes the problems and are working to make adjustments and modernize the EPD. We hope to see these issues clear up this summer. Until then, I would suggest not using the milk EPD in your genetic selection.

How the Genetic Evaluation Impacts Genetic Selection

In August 2018, the American Gelbvieh Association (AGA) transitioned to a

new system for the national cattle evaluation. The AGA is a part of International Genetic Solutions (IGS), which is a collaboration between other beef breed associations. IGS invested in the BOLT software, which brings with it the single-step genetic evaluation, a more streamlined method for incorporating genomic results into expected progeny differences (EPDs).

This partnership benefits the commercial beef industry by providing EPDs backed by millions of pedigree, performance, and genomic records, which are directly comparable across the partner breeds. Hands down, BOLT technology provides the best and most accurate method for genetic prediction. Below is a sampling of improvements brought on by BOLT:

More Informed Genetic Selection Decisions: Purchasing bulls with genomic-enhanced expected progeny differences (GE-EPDs) allows commercial producers to make selection decisions with less risk due to an increase in the accuracy of a non-parent animal's EPDs. The addition of genomic data to an EPD is comparable to adding another source of information, like progeny or pedigree records. Specifically on lowly heritable traits, such as reproductive traits, genomic data has the potential to greatly increase the accuracy of an EPD prediction and can be demonstrated. While the accuracy value associated with an EPD can be a bit difficult to understand in practical terms, the progeny equivalent table provides information that's easy to comprehend in the most practical of terms – how many calves worth of data was added?

Progeny equivalent values in the table below describe the number

of progeny with reported data for each trait that would be needed to match the amount accuracy provided by a genomic test. For animals within the IGS multi-breed evaluation the progeny equivalent for calving ease direct (CED) is 15, which means that the inclusion of a genomic test is the equivalent to having calved 15 heifers bred to a particular bull.

Genomic Progeny Equivalents Multi-Breed Genetic Evaluation Powered by BOLT	
Trait	Progeny
Calving Ease	25
Maternal Calving Ease	4
Birth Weight	22
Weaning Weight	25
Yearling Weight	25
Milk	19
Stayability	15
Marbling	8
Ribeye Area	6
Back Fat	8

Across Breed Comparison: Because AGA breeders have chosen to collaborate with members of other breed associations to pool their pedigree, performance, and genomic data for a multi-breed NCE, most Gelbvieh and Balancer® animals' EPDs can be directly comparable with other animals in the registries of other partner breed associations within the IGS group. Gelbvieh and Balancer EPDs that are excluded from direct comparison include: heifer pregnancy, 30-month pregnancy and dry matter intake. The \$Cow, efficiency profit index and FPI™ indices are unique to the AGA and are not comparable across breeds.

Rippe Gelbvieh Balancer® and Gelbvieh Bull Sale:

Black Balancer Bulls Lots 1-67
 Black Purebred Bulls Lots 68-78
 Red Purebred Bulls..... Lots 79 & 80
 Red Balancer Bulls Lots 81-104
 Fall Bred Heifers..... Lot 105
 Commercial Heifers Lots 106-116

ET Bulls:

The ET bulls are raised by a surrogate mother. Therefore, the bulls actual birth weight and weaning weight are not a representation of the bulls genetics. Consequently, we have chosen not to provide this information as it is inaccurate. EPDs do a much better job of showing the genetic value of these bulls.

Semen Interest:

Rippe Gelbvieh will retain 1/2 semen and certificate interest on every bull in the catalog unless otherwise noted. This will only affect a very small portion of the bulls we sell. If we decide to collect a bull for our in herd use, it will be at our expense and your convenience.

Videos of the Bulls:

You will notice there are not many pictures of the bulls in the catalog. This is because we decided to video each and every bull and all the videos are on our website at www.rippegelbvieh.com. We did this because we take great pride in the structure of our bull lineup and this allows buyers to evaluate before they come to our sale.

Genetic Defects:

We have tested all potential carriers for defects. Any animal that was deemed to be a carrier we took out of the bull pen.

BLACK BALANCER®

This is a crazy good pen of black balancer bulls. The first 13 bulls are fall bulls or as we like to call them Age Advantage bulls. We have been fortunate enough to own some of the best balancer bulls the breed has had in Watchman and Nevada. Both are proven elite AI sires and I think we have one more that has that kind of potential in 710E. You will see a lot of sons out of 710E in this sale. I don't think anyone in the industry can boast a set of black balancer bulls with this kind of EPD's. Their AVERAGE rank in the breed is top 25% for Calving ease, top 19% for weaning weight, top 19% for yearling weight, top 21% for calving ease maternal, top 19% for carcass rank, top 22% for marbling and top 12% for Feeder Profit Index. These are simply our averages, some would call these type of numbers their best bull. Every bull is sire verified and all of them have genomic enhanced EPD's. Most of these bulls are Homo black and homo polled. I don't think Rippe Gelbvieh has ever brought a set of balancer bulls this deep to town before. They are built for our customers, commercial cattlemen.

This bull catches your eye when you walk into the pen. He also ranks in the top 20% of the breed for both weaning and yearling weight.

**LOT 14 • DBRG 930G**

- EPD wise he ranks in the top 1% of the breed for both weaning and yearling weight. Top 1% of the breed for Carcass weight. Top 1% of the breed for Marbling. Feeder Profit Index he also ranks in the top 1% of the breed. I put a criteria in the Gelbvieh database of a minimum of 82 on weaning weight, 129 on yearling weight, .86 on marbling and 97 on feeder profit index. There was only 1 other 1/2 blood bull besides Lot 14 to meet that criteria. He is in a special group.
- His personal ratio's have also set him apart. He ranked 9th out of 140 bulls in his contemporary group for weaning weight. He ranked 4th for Yearling weight. He also ratio'd 157 for IMF on his ultrasound scan.
- He goes back to the Roxi cow on his dam side. The sire of his dam is Nevada. On the topside of the pedigree he is out of our new Herd sire Payweight 710E.
- He also goes back to Nevada's mom, 6044.

This big framed bull is deep bodied, heavy muscled and sound structured. It is tough to pick a hole in this bull. Look at his adjusted scrotal of 42.4.

**LOT 29 • DBGR 995G**

- We have several full ET brothers out of this flush. Lots 29, 41, 42, 51, 52. I struggle on which one is the best. You take a look at each one and decide.
- They combine the great cow family of 6044, who is Nevada's mom with the Angus AI bull Stunner. 6044 is one of the best PB Gelbvieh cows this breed has seen. Stunner is one of the best Angus bulls we have used. He puts more muscle and performance in his calves than his sire Capitalist 316.
- Every one of these full brothers is Homo Polled and Homo Black. They all have great EPD's across the board. They are calving ease with good growth. Ranking in the top of the breed for Calving Ease Maternal. Top of the breed for marbling and Feeder Profit Index.
- This mating will make flat awesome females. People are raving about the Capitalist 316 daughters and we know what 6044 is like for a 13 year old purebred gelbvieh cow. If you want to build a cowherd, buy one of these full brothers.

710E son that is very deep bodied and sound structured. He ranks in the top 15% of the breed for calving ease. In addition, he ranks in the top 3% of the breed for both growth traits. How many sales do you go to where the last balancer bull in their catalog ranks in the top 3% for Feeder Profit Index?

BLACK PUREBRED

This is a very interesting pen of Purebred bulls. There are several differences between them. We have some big and high performing ones, while others are more calving ease. We have a Twister son to lead them off, but we also have several sons out of Destination, which is a calving ease Purebred bull we purchased from Sandy Knoll Farms. I think we have combined some top cow families in this set - L643 who is the mother of Sam, Roxi who has been a great donor for us for many years, and 6044 who is the mother of Nevada. All of these bulls are sire verified. All of these bulls have genomic enhanced EPD's. The AVERAGE of this group is top 25% for calving ease, top 29% for Yearling weight, top 18% for Calving ease maternal, top 27% for carcass weight, top 19% for marbling, and top 11% for Feeder Profit Index.

- The only Twister son we have this year. He comes from our fall program. I think everyone needs to stop and look at the video of this bull. He is very heavy muscled, deep bodied, attractive and maybe his best attribute is his structure. He is big footed, takes a long stride, and hits it every time.

- I am really excited to showcase our first sons out of Destination. This bull is sound structured, attractive and deep bodied. He stuck out to me on grass when his dam weaned this bull at 59% of her body weight. He ratio'd 90 for birth and 104 for weaning.

- This bull combines the great cow family of Roxi and L643 who is the granddam and mother of the great AI bull Sam. Both cows have had a big impact in our herd for producing easy fleshing, sound structured cattle with great longevity. Genetically, this bull excels from a growth and performance standpoint.
- He ranks in the top 1% of the breed for both weaning and yearling weight. He ranks in the top 15% of the breed for ribeye. He also ranks in the top 4% of the breed for Feeder Profit Index. How unique are this bull's EPDs?
- I ran a genetic search on the Gelbvieh database for the following criteria: minimum of 11 for CED, 78 for WW, 121 for YW, 6 for CEM, .76 for REA, .19 for Marbling, 80 for Feeder Profit Index. He was one of 8 PB94 bulls in the entire registry.

**DBGR TWISTER 451B
SIRE OF LOT 68 & MGS OF LOT 69**

- The 706E cow went right into our donor program. She was my favorite purebred heifer as a calf. She is a Twister daughter that goes back to the L643 cow and Watchman.
- We are very excited about these Destination calves. We purchased him from Sandy Knoll. This bull ranks in the top 10% of the breed for calving ease and top 10% for yearling weight. He also ranks in the top 2% for Feeder Profit Index. This bull would be perfect to mate to purebred Gelbvieh cows that need some calving ease and marbling.
- Look at this bull's ultrasound scan. He ratio'd 120 against a bunch of balancers. If I would of ratio'd him against only purebreds, he would of ratio'd 143.
- How special are his EPD's? I ran a genetic search with the following criteria — minimum of 16 for CED, maximum of -1.1 for birth weight, minimum of 68 for weaning weight, minimum of 103 for yearling weight, minimum for .35 for marbling, minimum of 80 for feeder profit index. He is 1 of 3 bulls in the entire registry.

Heifer bull specialist out of Granite 7Z who we used to clean up heifers for years. Top 2% for calving ease and top 10% for marbling and top 15% for Feeder Profit Index.

RED PUREBRED

We only have 2 red purebred bulls this year and will probably continue with just a handful. I thought we would have some ET bulls out of 248Z, but they all decided to be heifers. These 2 bulls are interesting though. The first one is a fall bull out of our herdbull Duramax. The other is a heifer bull out of Protégé. Both of these bulls would work great on a set of red angus cows that need some heterosis and performance.

Red purebred that is an extreme heifer bull. Use this bull to go on a set of Red Angus heifers to provide heterosis. This is a very interesting bull who ranks in the top 1% for Calving ease and top 3% for ribeye and top 20% for Feeder Profit Index. He is out of Protégé, who we own with Gustins and Thorstonsens.

Willow and Kayden

CMR PROTEGE 121E ET
SIRE OF LOT 80

RED BALANCER

This is a good pen of red balancers that have as much muscling and performance as you will find anywhere. Like we did last year, we have a pile of Gladiator sons. This is our last set of Red Baron calves I believe, but we will still have more out of his dam the great 248Z cow. We do have some new sires represented in Protégé and Hard Drive. Protégé is a purebred Gelbvieh bull we purchased with Thorstensions from Gustins in North Dakota. We really like the phenotype of those cattle and he comes from one of the best cows the breed has in Mandy 32S. I have tried to purchase others sons of her and come up

short. There is also a pile of sons from the popular red angus sire Hard Drive. His semen is rare but we used some in a flush. Finding good red bulls that aren't red angus is tough. We all know you need to be using something else to get heterosis. This set of bulls can do that. They rank in the top 30% of the breed for birth weight, top 22% for weaning weight, top 26% for yearling weight, top 29% for calving ease maternal, top 34% for carcass weight and top 22% for Feeder Profit index. Don't be afraid to stop by and look at these bulls prior to sale day.

Our final bull in the sale out of Protégé. His mom has been a productive 9 year old cow. This bull is very sound structured and deep bodied. He ranks in the top 20% for calving ease and top 20% for weaning weight.

FALL BRED HEIFERS

LOT 105

We are selling approximately 12 Fall Bred Balancer Heifers. We will have more information on the supplement sheet. We are waiting to pregnancy check them. There will probably be two groups: One that will calve from August 10 to August 31 and the other will calve between Sep 1 and Sep 25.

COMMERCIAL HEIFERS

We are offering 70 Commercial Heifers for sale this year - all out of our own herd. There are 48 black and 22 red. They have all passed a pelvic measurement, passed a reproductive tract score, been freeze branded, bangs vaccinated, and developed to be excellent females. All heifers will be kept for free until March 23 and will need to be picked up by the owner unless prior arrangements have been made. We would keep them at our place and AI these heifers at a reasonable charge if the purchaser would like. Several of the heifers come from our registered herd. If someone would like registration papers transferred it would be an additional \$100/head.

LOT 106

10 Black Heifers sired by 710E — These heifers are 50 to 75% Gelbvieh with the balance being Angus. These have all been tested homozygous polled with the exception of 1. 710E is our main black balancer herd bull.

LOT 107

5 Black Heifers sired by Lifeline — These are 50% Gelbvieh with the balance being Angus. Lifeline is a popular Balancer AI bull. We only kept 1 Lifeline for ourselves.

LOT 108

8 Black Heifers sired by Sam Adams — These are 50% Gelbvieh with the balance being Angus. Sam Adams is a balancer herd bull of ours that we chose from Gustins in North Dakota. Every one of our Sam Adams heifers is in this group.

LOT 109

6 Black Heifers sired by Angus bulls — These heifers are 25 to 50% Gelbvieh with the balance being Angus. Most of these heifers are out of the popular AI Angus bull Stunner.

LOT 110

8 Black Heifers sired by Balancer bulls — These heifers are all 50% Gelbvieh with the balance being Angus. The sires include Nevada, 532, Keystone, WCR59, Yogi. All of those sires are either herd bulls or AI bulls.

LOT 111

11 Black Heifers sired by multiple or unknown sires — These heifers are 25% to 75% Gelbvieh with the balance being Angus.

LOT 112

4 Red Heifers sired by Protégé — These heifers are 63 to 75% Gelbvieh with the balance being Red Angus. We are really excited about Protégé. His dam is one of the best cows in the breed.

LOT 113

5 Red Heifers sired by Money — These heifers are 50% Gelbvieh with the balance being Red Angus. Money is an AI bull we selected from the Eagle Pass program. He is sired by Hard Drive.

LOT 114

5 Red Heifers sired by Overdrive — These heifers are 38% to 50% Gelbvieh with the balance being Red Angus. Overdrive is our main red balancer herd bull. He is sired by Hard Drive.

LOT 115

3 Red Heifers sired by Red Baron — These heifers are 50% Gelbvieh with the balance being Red Angus. Red Baron is out of our best red donor cow in 248Z. Unfortunately, he died young.

LOT 116

5 Red Heifers sired by Duramax — These heifers are 63% to 75% Gelbvieh with the balance being Red Angus. Duramax is our Red Purebred herd bull.

SPECIAL SPEAKER ANNOUNCED FOR NIGHT BEFORE BULL SALE

By Dustin Rippe

Rippe Gelbvieh is excited to offer this opportunity to the community. Troy Applehans with CattleFax will be speaking in Belleville at the country club. I encourage everyone to attend even if you aren't in need of a bull. Troy is a Market Analyst for CattleFax and he specializes in the Cow/calf and stocker market. Troy was a co-worker of mine when I was employed at CattleFax.

Cattlefax is a member owned information organization serving producers in all segments of the cattle business. CattleFax was formed in 1968 by a group of progressive cattlemen who saw the value of a self-help system to collect, analyze, and distribute information needed for good marketing and business decisions which has resulted in the largest private database in the country. Once again I would encourage everyone to attend. There will be something for everyone to learn in this presentation. Please give me a call if you have any questions. The presentation will start at 7 PM. Supper will be provided.

Troy is the CattleFax market analyst responsible for feeder cattle and cow/calf regions of the Southern Plains region as well as Southeastern states of the U.S. He also covers feedyards in the Midwest region. Troy is a graduate of Oklahoma State University with a degree in Animal Science and a strong cow/calf and seedstock cattle background. Previously, he was

employed by Cargill Animal Nutrition as a cattle mineral specialist, Future Beef Operations as a member of the cattle procurement team and the American Gelbvieh Association as a regional manager. He also served as Director of Field Services/Advertising coordinator for Cattle Today, Inc. for many years.

*Troy Applehans
Market Analyst – Cow/calf and
Stocker Market Specialist*

.....

Rick Pfortmiller from Geneseek will be an additional speaker. Rick grew up on a livestock and grain farm in North-Central Kansas, where he, his wife and daughters now live as the fourth and fifth generations on the land. They manage the family's commercial cow-calf operation and produce milo and wheat. Rick graduated from Kansas State University with a degree in animal science and has an extensive background in genomic applications in the seedstock and commercial cattle sectors.
