## RIPPE GELBVIEH

### 24<sup>TH</sup> Annual Bull Sale

101 Balancer® & Gelbvieh Bulls,  
50 Registered & Commercial Open Heifers  
21 Fall Bred Heifers

SATURDAY, MARCH 12 • 1:00 P.M.

Complimentary Lunch • 12:00

SALE LOCATION: Belleville 81 Livestock – Belleville, KS

## Greetings Cattlemen & Cattlewomen:

The weather is a stark change from a year ago writing this letter. The people in this business are still as tough as they come. The cattle business is not for the faint of heart that is for sure. The good news is, the outlook for the cattle market looks as good as ever from my vantage point.

Rippe Gelbvieh has continued to assemble a cow herd that is balanced in ALL traits that are economically important to our customers – commercial cattlemen. We have a complete lineup of Balancer and Purebred Gelbvieh bulls that have enough genetic variation to compliment your cow herd and allow you to take full advantage of the “free lunch” that heterosis and hybrid vigor offer.

In my eyes, what sets us at Rippe Gelbvieh apart is how much we are tied into the cattle business. My dad, Duane, manages the cow calf and farming operation. I, Dustin, own and operate Roode Feedyard at Fairbury, NE. I buy a lot of customer calves and feed out our own each year. This allows us to collect carcass data back on many, many individual animals. I want to emphasize this is not a side business for us, we both make our living in the cattle industry and are really passionate about its future.

Joel Cast is also very instrumental in this operation. Joel knows the cattle as well as any one. I can point out a cow 50 yards away and he can tell me what cow it is along with 2 generations back in her pedigree and what the birthweight was of her last calf. We couldn't manage this herd or collect the data we do without him.

Many places preach maternal. How can they preach maternal without taking cow weights and looking at cow efficiency? Joel takes pride in taking an udder score on every cow that calves. We also added feet scores to our catalog this year. Every heifer is DNA'd prior to being selected as a replacement.

Not many operations can match the genetic lineup we are offering. It isn't by chance. We run a very large seedstock herd and are very aggressive in our AI and ET program along with owning some of the best bulls in the business. From a carcass standpoint, we have as much actual kill data as anyone in the country. We ultrasound the bulls and heifers each and every year.

It is our hope that the information we track is valuable to you when you are selecting bulls. I won't buy a bull that is not sire verified. I won't buy a bull without knowing the udder on the dam. I won't buy a bull that doesn't have genomics. You shouldn't either. We will be posting additional information on a supplement sheet prior to the sale on our website. Please call ahead of the sale and we can go over your program and your program's needs.

*Duane & Dustin Rippe*

## Contact Information:

For information regarding the bulls contact Dustin.

## General Information – Terms & Conditions

### Sale Location:

Belleville 81 Livestock, 1160 Old US Highway 81,  
Belleville, KS 66935. Located ½ mile south of the Hwy 81  
and 36 intersections.

### Auctioneer:

Kyle Elwood, Salina, KS ..... 785-493-2901

### Ringmen:

Andee Marston, Kansas Stockman ..... 785-250-4449  
Troy Applehans, CBD Oils ..... 303-886-0775  
Matt Printz, Kansas Stockman ..... 308-440-2918

### Supplement Sheet:

The supplement sheet will be available on sale day and  
on our website about 3 days prior to the bull sale. Any  
information on the supplement sheet or announced on  
sale day will take precedence over the catalog.

### Health:

All bulls will be ready for interstate shipment. They will be  
BVD tested and had their Lepto shot. In addition, they will  
have passed a breeding soundness exam along with being  
poured with an Ivermectin type of product before delivery.

### Sale Day Phones:

Sale Barn ..... 785-527-2558  
Dustin Rippe ..... 316-323-4874  
Dustin Rippe ..... 402-200-0555

Catalog designed by: *Lynn Valentine*

### Terms and Conditions:

Cash on sale day. All cattle will sell under the  
recommended terms of the AGA. If you would like to be  
offered credit, please call Duane prior to sale day.

### Volume Discount:

If you purchase five or more bulls in one year, you will  
receive 5% off the price of each bull.

### Delivery & Trucking:

Free delivery within 300 miles of Hubbell, NE. For all  
bulls further than 300 miles, we will make every effort to  
accommodate the buyer. Delivery will not exceed \$300/  
bull to a central location. Any bull taken on sale day, we will  
deduct \$100 from the bill. The heifers must be picked up  
within 8 days of the sale unless other arrangements are made.

### Transfers:

Registration papers will be transferred upon request. Any  
Registration paper wanted on heifers is for \$100/hd.

### Liability:

Neither the sale host, sale facility, sale management, nor  
the auctioneer assumes any liability for any accidents that  
may occur.

## Rippe Gelbvieh Bull Guarantee:

- Our #1 goal is customer satisfaction.
- Rippe Gelbvieh takes 100% responsibility on every bull purchased from our sale until the bull is delivered to your ranch. If there is any problem with the bull upon delivery or at our place we will cover the cost completely and make sure you are satisfied.
- If you experience a problem with disposition or structural soundness soon after you receive your purchase, Rippe Gelbvieh will replace the bull with similar quality, take the bull back and offer credit on next year's sale.
- If you experience abnormal calving difficulty where the herdsire is at fault we demand that the bull be sold for slaughter and a full refund applied to a replacement bull of the buyer's choice.

## First Season Death and Injury Warranty:

Rippe Gelbvieh has offered to share this cost with their customers. There was a lot of confusion over our old warranty. Our new program will allow us to keep our customers satisfied and allow both parties to be satisfied with everyone sharing in the cost.

### Coverage/Limitations:

The coverage of this warranty is for the first breeding season or for the first 90 days after the bull is turned out, unless other arrangements are made. This warranty is good for death and all loss-of-use injuries. The warranty is void if this is caused by negligence or mistreatment of the bull. Replacement value will be the actual purchase cost of the Rippe Gelbvieh bulls covered minus any salvage value or other compensation received by the customer.

### Claims:

All claims must be reported to Rippe Gelbvieh within 24 hours of discovery and must be examined by a licensed veterinarian.

### Injured:

If the injury is not permanent and can be returned to service, Rippe Gelbvieh will work with you to supply a replacement bull to use, at no cost, until the original bull can be returned to service. If the injury is permanent, Rippe Gelbvieh will supply a bull to finish out the season. At the end of the breeding season the customer can choose to keep the replacement bull as fulfillment of this warranty or return him to Rippe Gelbvieh and receive credit on next year's sale. The credit will equal the purchase price of the bull minus any salvage value from the original bull.

### Death:

When a Rippe Gelbvieh bull dies between the dates outlined above Rippe Gelbvieh will supply another bull to finish out the breeding season. At the end of the breeding season, the customer can either keep the replacement bull as fulfillment of this warranty or receive credit on next year's sale. The credit will equal the purchase price of the bull minus any compensation received by an insurance company.

### Cost:

Cost for the death and injury warranty will be 5% of purchase price, due at time of purchase. We feel that this is a reasonable cost where we can all share in the cost of a loss in a bull during the first breeding season. If a customer chooses not to cover their animal against death or injury, they assume all risk associated with the bull once it leaves our place.

### Cow Data

AOD = Age of Dam  
Dam Wt = Cow weight 6 weeks after weaning  
%BWW = Percent the dam weaned of her body weight  
Feet = Foot score  
DOC = Docility

### EPDs

Expected progeny differences. Winter 2020 evaluation provided by the AGA

✓ Sire verified

✓ Dam verified

## Homozygous:

If an animal is homozygous for polled or black, you will not have a horned or red calf born out of this sire. If an animal is heterozygous, it carries one allele for either horned/polled or red/black.

## Heifer Bulls

If you see a bull with an **H** Rippe Gelbvieh believes it is a heifer bull.

## Udder:

The first number is suspension and second references teat size. 9 is ideal. It represents very small teat size and very tight udder suspension. 1 represents very large, ballooned shape teat and a very pendulous suspension.

## Feet:

We scored each bull for their feet. The Gelbvieh breed has the best feet of any breed we work with. Adding Angus and Red Angus has led to some less than ideal feet. I scored them as follows: 1 – Bad 2- Below Average 3 – Average 4- Good 5- Great

## Doc = Docility:

1 - The bull is content standing alone. 2- The bull is nervous when standing in a pen alone. 3 – The bull is looking for a hole in the fence when alone. 4 – The bull is looking to chase you out of the pen.

## Percent Gelbvieh:

We rounded every bull to the nearest 1/8 in Gelbvieh percentage.

## American Gelbvieh Association Expected Progeny Differences (EPDs)

Below is an exhaustive list of the expected progeny differences (EPDs) and index values provided by the AGA along with a definition of each trait that is measured. Since AGA's release of BOLT-powered EPDs on August 6, 2018, the majority of EPDs are BOLT EPDs, which means that Gelbvieh and Balancer® animals BOLT EPDs can be directly compared with other animals in the registries of other partner breed associations within the International Genetic Solutions (IGS) group. Gelbvieh and Balancer EPDs that are excluded from BOLT include: heifer pregnancy, 30-month pregnancy, and dry matter intake. The \$Cow, efficiency profit index, and FPI™ indices are unique to the AGA and are not comparable across breeds.

### Maternal Traits

**Calving ease direct (CED):** Percent of unassisted births of a bull's calves when he is used on heifers. A higher number is favorable, meaning better calving ease. This EPD can be vital to a rancher looking to decrease the amount of calves pulled in his herd.

**Milk (MILK):** The genetic ability of a sire's daughters to produce milk expressed in pounds of weaning weight.

**Calving ease maternal (CEM):** Represented as percent of unassisted births in a sire's first-calving daughters. A higher number represents more favorable calving ease. This EPD is important to a rancher's bottom line because it predicts which animals produce daughters with a genetic pre-disposition to calve unassisted as heifers.

**Heifer pregnancy (HP):** Predicts the probability that a bull's daughters will become pregnant as firstcalf heifers in a regular breeding season, expressed as a percent. A higher value of this EPD is favorable, meaning that a higher percentage of a sire's daughters get pregnant as first calf heifers compared to other sires in his contemporary group.

**30-month pregnancy (Pg30):** Predicts the probability that a bull's daughters will become pregnant and calve at three years of age, given that they calved as first-calf heifers. This EPD is expressed as a percent, again, with a higher number being more favorable meaning a higher percentage of a sire's daughters will calve at three years of age, given they calved as firstcalf heifers.

**Stayability (ST):** Predicts the genetic difference, in terms of percent probability, that a bull's daughters will stay productive within a herd to at least six years of age. The stayability EPD is one of the best measures currently available to compare a bull's ability to produce females with reproductive longevity.

### Growth Traits

**Birth weight (BW):** Predicts the difference, in pounds, for birth weight of the calf.

**Weaning weight (WW):** Predicts the difference, in pounds, for weaning weight (adjusted to age of dam and a standard 205 days of age). This is an indicator of growth from birth to weaning.

**Yearling weight (YW):** Predicts the expected difference, in pounds, for yearling weight (adjusted to a standard 365 days of age). This is an indicator of growth from birth to yearling.

### Carcass traits

**Yield grade (YG):** Differences in yield grade score, which is a predictor of percent retail product. Smaller values suggest that progeny will have a better lean to fat ratio.

**Carcass weight (CW):** Differences in pounds of hot carcass weight, adjusted to an industry standard age endpoint.

**Ribeye area (REA):** Differences in ribeye area in inches between the

12th and 13th rib. Greater ribeye areas are preferable.

**Marbling (MB):** Predicts the differences in the degree of marbling within the ribeye as expressed in marbling score units. Greater marbling numbers are preferable and are an indicator of higher carcass quality grades.

**Fat (FT):** Differences for fat thickness, in inches, for a carcass over the 12th rib, smaller numbers of fat thickness are preferable as excess fat can be detrimental to yield grade.

### Efficiency Traits

**Dry matter intake (DMI):** Represents the average daily dry matter intake per day consumed in pounds. A negative, or lesser value, is more favorable. For example, Bull A has a DMI EPD of .15 and Bull B has a DMI EPD of -.20, so the progeny of Bull B consume, on average, .35

pound less dry matter per day than progeny from Bull A.

### Indexes

**Total maternal (TM):** An index that combines growth and milk information as a prediction of the weaning weight performance of calves from a sire's daughters. As an index, this value is not reported with an accompanying accuracy. A greater TM value means a mother returns comparatively higher weaning weights on her calves.  $TM \text{ Index} = MK \text{ EPD} + \frac{1}{2} WW \text{ EPD}$ .

**\$Cow:** Represents the genetic value in dollars of profit of an animal when retained as a replacement female relative to other animals in the herd. A higher number represents more profitable genetics for maternal productivity. \$Cow will serve producers in selecting bulls that will sire daughters with stayability and reproductive efficiency as well as other traits that lead to profitability in a production system, such as milk, calving ease, moderate mature weight and the ability of calves to gain. A female's genetics also influence the performance of her calves in the feedlot and at slaughter, so traits such as feed efficiency and carcass value are also included in \$Cow.

**Efficiency profit index (EPI):** An economic selection index developed to aid producers in selecting for more feed efficient cattle that still have acceptable amounts of gain. The EPI provides slight negative pressure on intake, while keeping gain at a constant value. By selecting on this index, producers will be able to find those animals that gain the same amount as their contemporaries while eating less.

**FPI™:** An economic selection index, which stands for feeder profit index, is designed to aid producers in selecting sires whose progeny will perform in the feedlot and are sold on a grade and yield standpoint. Well ranking sires for FPI have higher marbling and carcass weight than their contemporaries. As a terminal index, little emphasis is put on maternal traits such as stayability and calving ease.

*Dustin's kids.*

## Gelbvieh and Balancer® Breed Average EPDS (For non-parent animals, born on or after Jan. 1, 2021)

### How the Genetic Evaluation Impacts Genetic Selection

In August 2018, the American Gelbvieh Association (AGA)

transitioned to a new system for the national cattle evaluation. The AGA is a part of International Genetic Solutions (IGS), which is a collaboration between other beef breed associations. IGS invested in the BOLT software, which brings with it the single-step genetic evaluation, a more streamlined method for incorporating genomic results into expected progeny differences (EPDs).

This partnership benefits the commercial beef industry by providing EPDs backed by millions of pedigree, performance, and genomic records, which are directly comparable across the partner breeds. Hands down, BOLT technology provides the best and most accurate method for genetic prediction. Below is a sampling of improvements brought on by BOLT:

**More Informed Genetic Selection Decisions:** Purchasing bulls with genomic-enhanced expected progeny differences (GE-EPDs) allows commercial producers to make selection decisions with less risk due to an increase in the accuracy of a non-parent animal's EPDs. The addition of genomic data to an EPD is comparable to adding another source of information, like progeny or pedigree records. Specifically on lowly heritable traits, such as reproductive traits, genomic data has the potential to greatly increase the accuracy of an EPD prediction and can be demonstrated. While the accuracy value associated with an EPD can be a bit difficult to understand in practical terms, the progeny equivalent table provides information that's easy to comprehend in the most practical of terms – how many calves worth of data was added?

Progeny equivalent values in the table below describe the number

of progeny with reported data for each trait that would be needed to match the amount accuracy provided by a genomic test. For animals within the IGS multi-breed evaluation the progeny equivalent for calving ease direct (CED) is 15, which means that the inclusion of a genomic test is the equivalent to having calved 15 heifers bred to a particular bull.

Genomic Progeny Equivalents Multi-Breed Genetic Evaluation Powered by BOLT	
Trait	Progeny
Calving Ease	25
Maternal Calving Ease	4
Birth Weight	22
Weaning Weight	25
Yearling Weight	25
Milk	19
Stayability	15
Marbling	8
Ribeye Area	6
Back Fat	8

**Across Breed Comparison:** Because AGA breeders have chosen to collaborate with members of other breed associations to pool their pedigree, performance, and genomic data for a multi-breed NCE, most Gelbvieh and Balancer® animals' EPDs can be directly comparable with other animals in the registries of other partner breed associations within the IGS group. Gelbvieh and Balancer EPDs that are excluded from direct comparison include: heifer pregnancy, 30-month pregnancy and dry matter intake. The \$Cow, efficiency profit index and FPI™ indices are unique to the AGA and are not comparable across breeds.

### Rippe Gelbvieh Balancer® and Gelbvieh Bull Sale:

 Black Purebred Bulls..... Lots 68-84  
 Red Purebred Bulls..... Lots 85 & 86  
 Red Balancer Bulls..... Lots 87-102  
 Fall Bred Heifers ..... Lots 103-104  
 Commercial Heifers..... Lots TBD

### ET Bulls:

The ET bulls are raised by a surrogate mother. Therefore, the bulls actual birth weight and weaning weight are not a representation of the bulls genetics. Consequently, we have chosen not to provide this information as it is inaccurate. EPDs do a much better job of showing the genetic value of these bulls.

### Semen Interest:

Rippe Gelbvieh will retain 1/2 semen and certificate interest on every bull in the catalog unless otherwise noted. This will only affect a very small portion of the bulls we sell. If we decide to collect a bull for our in herd use, it will be at our expense and your convenience.

### Videos of the Bulls:

You will notice there are not many pictures of the bulls in the catalog. This is because we decided to video each and every bull and all the videos are on our website at [www.rippegelbvieh.com](http://www.rippegelbvieh.com). We did this because we take great pride in the structure of our bull lineup and this allows buyers to evaluate before they come to our sale.

### Genetic Defects:

We have tested all potential carriers for defects. Any animal that was deemed to be a carrier we took out of the bull pen.

# BLACK BALANCER®

This is our best set of Black Balancers we have ever raised. (I am told I say that every year.) The first 11 bulls are fall bulls, which we call Age Advantage bulls. They are 18 months and ready to cover a large set of cows. This set of bulls has excellent structure and there is a good mix of heifer bulls (39) and beef bulls made for cows. KG Justified, Exponential, Casino Bomber, Stunner, Rainfall, Capitalist, and Declaration are the majority of the Angus sires we used. 710E, Captain, Rock are the main Balancer sired bulls. Every bull is sire verified and every bull has genomic enhanced EPD's. Take note on how high these bulls are for the Feeder Profit Index (FPI). The average percentile rank is top 10% for calving ease, top 15% for weaning weight, top 15% for marbling, and top 3% for Feeder Profit Index. We achieve these numbers because we simply cut the bad numbered bulls no matter how good they look. There was only 38 bulls born in the breed this year with an FPI over 100 and we raised 16 of them.

ET bull out of Exponential and one of my favorite cows in 8167. This bull is heavy muscled and is a heifer bull. He scanned with almost a 16 inch ribeye and over 5.2% IMF. Look at his growth numbers at top 2% of the breed. His carcass traits are excellent and he is one of the few bulls with an FPI over 100 in the entire country. This is usually Lot 1 on most sales, but he is lot 59 here.

Heifer bull deluxe out of Captain. Top 1% for calving ease and birth weight. Top 20% for yearling weight. Top 15% for FPI.

# BLACK PUREBRED

We raise a very large number of purebred bulls. Only the very best make the sale catalog. We put extreme emphasis on making sure these are exceptional purebred bulls. Every purebred bull is Homozygous Polled. We use lots of different sires but two of our own herd bulls come towards the top in Mayor G443 who we purchased from Chimney Butte Ranch and Destination who we purchased from Sandy Knoll. This is our first set of Mayor G443 calves and they possess great rib and structure along with bigtime spread EPD's. He is a son of Eminence who is now deceased. The AVERAGE percentile rank of these bull is top 15% for calving ease, top 20% for weaning weight, top 20% for marbling, and top 10% for Feeder Profit Index. The first 4 bulls are 18 month old Age Advantage bulls that are ready for a big set of cows.

Deep bodied, moderate framed, and thick describe this unique breeding piece. This heifer bull weaned off his dam at 50% of her body weight and goes back to a great cow family. Not only is he top 5% for marbling that is before he scanned with 4.9% IMF and ratio'd 110 against a bunch of high marbling balancer bulls. Think about a purebred heifer bull that had an 18.6 inch ribeye and 4.9% IMF. You do not see Purebreds with this kind of EPD profile.

This bull comes from a special cow family here in 2100Z. She was the dam of Twister and our high seller last year that sold to Cedar Top Ranch and Black Gold Genetics. Phenotypically this bull has it all from great structure to a great look. He weaned off his dam at 51% of her body weight. From calving ease to yearling weight he ranks in the top 10% of the breed. Marbling ranks in the top 15% and FPI top 5%. I think this is a bull everyone needs to come see.

## RED PUREBRED

I only have 2 Red purebreds, but they are both seedstock quality red purebreds. We have worked very hard to improve our red program and bring in new genetics. I feel like both of these bulls represent that. They both go back to the L643 cow who is the mother of Sam. 387 cow is a red donor cow of ours. She is known for having a gorgeous udder and has produced some of the best red females on our ranch. 5402 is very interesting. She is a ¾ blood out of watchman that brought some interesting genetics into our red program. 5402's first calf is a donor for us in 706E. Every other calf is a cow in our program until this bull.

Gunner bull out of the great female producer 387. This was one of our best calves going to grass but tragedy struck when he got hurt on grass. I remember when Joel called me sad that he didn't think this bull was going to make it, but you couldn't even tell at weaning. It hurt his weaning weight, but he has caught up to the rest of the pen. You will really appreciate him for his depth of body and sound structure. This is the type of bull to build a red program out of. Top 2% for calving ease, top 20% for growth traits, and top 15% for FPI. He has the 32nd highest FPI of any red purebred raised this year.

I am very excited to offer this Red Purebred for sale. He is sound structured, big footed, big bodied, and heavy muscled. Getting Watchman's genetics, who was a breed changer in black Balancer population, into the red purebred population is a feat I didn't think I would live long enough to see. He is from a great cow family, the mother of the AI bull Sam in L643. The 5402 has been a female producer for us as every daughter is working in our herd and 706 is a donor. We purchased Protégé from the Gustin program with Thortenson's. I will cut to the chase, I am going to use this bull heavily in our red AI program. This bull has the highest FPI of any red bull raised this year. He combines great calving ease at top 15% of the breed with top 10% of the breed in weaning weight. His marbling is what sets him apart ranking top 3% of the breed. His FPI is in the top 1% of the breed.

**LOT 86 • 1146J**

# RED BALANCER®

I am excited to offer this set of Red Balancers. I have made it a point of emphasis to provide more growth in these red balancers and this set of bulls does just that. We have many Red Angus sires represented from Profitmaker, Spartacus, Energize, Brunswick, and Propulsion. I found Propulsion in North Dakota looking for an outcross Red Angus. ABS purchased this bull and I got some of the first semen he produced. The main red Balancer bull we used was Steadfast and this is first calf crop. He sold on our sale a couple years ago to the Gustin program in North Dakota. The cow side of these reds is top notch with many donor cows listed in the pedigrees. These bulls ranked in the top 25% of the breed for calving ease, top 45% for weaning weight, top 40% for Marbling and top 25% for Feeder Profit Index.

Very long and deep bodied bull out of the great 248 cow. 248 is a foundation cow for our red program and if you are serious about making a great cowherd look right here. The sire was recommended to us by Michael Rea for making great females. Did you notice he scanned with almost an 18 inch ribeye and 4% IMF.

This bull is designed perfectly. Sound structured, attractive, and deep bodied is what I wrote about him. He scanned amazing with a 16 inch ribeye and 4.7% IMF. He is a heifer bull ranking in the top 4% of the breed for calving ease.

**LOT 102 • 1347J**

# FALL BRED HEIFERS

## LOT 103

We are selling approximately 12 Fall Bred Balancer Heifers. We will have more information on sale day in terms of the exact number and how they are grouped according to how they pregnancy check. They have all been AI bred and cleaned up with our balancer heifer bull. They should start calving around the 10th of August.

## LOT 104

Wayne Kugel will be selling approximately 9 Fall Bred crossbred heifers. We will have more information on sale day in terms of the exact number and how they are grouped according to how they pregnancy check. The bull was turned out on October 23rd, and they should start calving around the 1st of August. These heifer's dams would have come right from our program and cleaned up with a calving ease balancer bull Wayne bought from us. Wayne worked for Rippe Gelbvieh for 19 years and now helps out when we are in a pinch. They have had their pre-breeding shots.

# COMMERCIAL HEIFERS

We are offering approximately 50 Black & Red Commercial Heifers for sale this year – all out of our own herd. We will put them into lots as the sale draws closer. Heterosis plays a huge role in cow longevity and all of these heifers are crossbred. They have all passed a pelvic measurement, passed a reproductive tract score, been freeze branded, bangs vaccinated, and developed to be excellent females. All heifers will be kept for free until March 22 and will need to be picked up by the owner unless prior arrangements have been made. We would keep them at our place and AI these heifers if the purchaser would like. The cost for us to AI them is \$3/hd/day after March 22 until you pick them up for feed and yardage. In addition, \$15/hd to set them up for AI, \$15/hd to AI them, and the cost of the semen. We typically AI the very end of April.

**710E • BALANCER® HERDSIRE**

Sire of Several Heifers.

**ENERGIZE**

Red Angus sires include Energize among others.

# SPECIAL SPEAKER ANNOUNCED FOR NIGHT BEFORE BULL SALE

By Dustin Rippe

Rippe Gelbvieh is excited to offer this opportunity to the community. Troy Applehans with CattleFax will be speaking in Belleville at the country club. I encourage everyone to attend even if you aren't in need of a bull. Troy is a Market Analyst for CattleFax and he specializes in the Cow/calf and stocker market. Troy was a co-worker of mine when I was employed at CattleFax.

Cattlefax is a member owned information organization serving producers in all segments of the cattle business. CattleFax was formed in 1968 by a group of progressive cattlemen who saw the value of a self-help system to collect, analyze, and distribute information needed for good marketing and business decisions which has resulted in the largest private database in the country. Once again I would encourage everyone to attend. There will be something for everyone to learn in this presentation. Please give me a call if you have any questions. The presentation will start at 7 PM. Supper will be provided.

Troy is the CattleFax market analyst responsible for feeder cattle and cow/calf regions of the Southern Plains region as well as Southeastern states of the U.S. He also covers feedyards in the Midwest region. Troy is a graduate of Oklahoma State University with a degree in Animal Science

and a strong cow/calf and seedstock cattle background. Previously, he was employed by Cargill Animal Nutrition as a cattle mineral specialist, Future Beef Operations as a member of the cattle procurement team and the American Gelbvieh Association as a regional manager. He also served as Director of Field Services/Advertising coordinator for Cattle Today, Inc. for many years.

*Troy Applehans  
Market Analyst – Cow/calf and  
Stocker Market Specialist*

Rick Pfortmiller from Geneseek will be an additional speaker. Rick grew up on a livestock and grain farm in North-Central Kansas, where he, his wife and daughters now live as the fourth and fifth generations on the land. They manage the family's commercial cow-calf operation and produce milo and wheat. Rick graduated from Kansas State University with a degree in animal science and has an extensive background in genomic applications in the seedstock and commercial cattle sectors.
