LOT  
104

Wayne Kugel is selling 8 Fall bred heifers. Wayne has been utilizing Rippe Gelbvieh genetis for 20 years and has assembled a great cowherd. These heifers are all out of a Payweight 1682 ET son that he purchased from us. They are bred to a Nevada bull that is in the top 1% for both calving ease and birthweight. Wayne can attest he is a great heifer bull. They will start calving around the 1st of August.

## COMMERCIAL HEIFERS

We are offering 48 Commercial Heifers for sale this year - all out of our own herd. There are 36 black and 12 red. Heterosis plays a huge role in cow longevity and all of these heifers are crossbred and many go to repeat buyers for this exact reason. They have all passed a pelvic measurement, passed a reproductive tract score, been freeze branded, bangs vaccinated, and developed to be excellent females. All heifers will be kept for free until March 20 and will need to be picked up by the owner unless other arrangements have been made. We would keep them at our place and AI these heifers if the purchaser would like. The cost for us to AI them is \$3/hd/day after March 20th until you pick them up for feed and yardage. In addition, \$15/hd to set them up, \$15 to AI them, and the cost of the semen. We AI at the end of April.

We allow Gate cut on all of these heifers.

LOT  
105

## EVERY HEIFER AND BULL WE SELL HAS RECEIVED A MAGNET.

Magnets can help prevent hardware disease in your cattle herd. Cattle commonly swallow foreign objects, such as nails and wire, found in the field or their feed. These objects do not always cause problems, but they can cause a disease commonly known as hardware disease. It is another thing we do to help insure your investment in our genetics.

## FREEZE BRANDING

Every bull and heifer has been freeze branded with their individual tattoo. This has made it easy for our large commercial operators to keep track of individual bulls. In fact, you can call me and I can look up a bull's EPD's several years after you have purchased him. These EPD's can and do change and if you ever have a question it allows us to look them up quickly using the Gelbvieh Association database.

## DNA

Every bull is sire verified and has genomic enhanced EPD's. This gives you higher accuracy EPD's and allows us to be more certain on their genetic merit. Also, because every bull we sell has a DNA profile with Geneseek, if you ever want to know what bull is the sire of your best calves, or calves that are a problem, we can DNA your calves and find out.

Sire verified

Dam verified

## ROODE FEEDYARDS

Dustin Rippe owns and operates Roode Feedyard and is always buying feeder cattle to fill it. I never make a promise that I will buy your set of calves, but text me the morning you are selling your calves. I buy thousands of customers' calves each year. How many seedstock operations do that? What is this worth? If your calves sell for \$3/cwt more because I am bidding on an 800 lb steer that is \$24/head. When you consider a bull siring 30 head in a year, that would equate to \$720/year or \$3600 over the lifetime of that bull. That is bringing value to your customer base.
